

Dell RecoverPoint for Virtual Machines 6.0.3 and later

Events Reference Guide

Notes, cautions, and warnings

 **NOTE:** A NOTE indicates important information that helps you make better use of your product.

 **CAUTION:** A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

 **WARNING:** A WARNING indicates a potential for property damage, personal injury, or death.

As part of an effort to improve product lines, revisions of software are periodically released. Therefore, some functions that are described in this document might not be applicable for all versions of the software in use. The product release notes provide the most up-to-date information about product features.

Contact your technical support professional if a product does not function properly or does not function as described in this document.

 **NOTE:** This document was accurate at publication time. Go to [Dell Support Site](#) to ensure that you are using the latest version of this document.

Purpose

This document includes conceptual information about managing a RecoverPoint for Virtual Machines system.

Audience

This document is intended for use by vSphere administrators who are responsible for managing the RecoverPoint for VMs system.

Related documentation

The following publications provide additional information:

- *Dell RecoverPoint for Virtual Machines Release Notes*
- *Dell RecoverPoint for Virtual Machines Quick Start Installation Poster*
- *Dell RecoverPoint for Virtual Machines Installation and Deployment Guide*
- *Dell RecoverPoint for Virtual Machines Product Guide*
- *Dell RecoverPoint for Virtual Machines HTML5 Plugin Administrator's Guide*
- *Dell RecoverPoint for Virtual Machines CLI Reference Guide*
- *Dell RecoverPoint for Virtual Machines Security Configuration Guide*
- *Dell RecoverPoint for Virtual Machines RESTful API* at [Explore APIs](#)

In addition to the core documents, we also provide white papers, technical notes, and demos.

Typographical conventions

This document uses the following style conventions:

Table 1. Style conventions

Formatting	Description
Bold	Used for names of interface elements, such as names of windows, dialog boxes, buttons, fields, tab names, key names, and menu paths (what the user specifically selects or clicks).
<i>Italic</i>	Used for full titles of publications referenced in text
Monospace	Used for: <ul style="list-style-type: none">• System code• System output, such as an error message or script

Table 1. Style conventions (continued)

Formatting	Description
	<ul style="list-style-type: none">• Pathnames, filenames, prompts, and syntax• Commands and options
<i>Monospace italic</i>	Used for variables
Monospace bold	Used for user input
[]	Square brackets enclose optional values.
	Vertical bar indicates alternate selections - the bar means "or"
{ }	Braces enclose content that the user must specify, such as x or y or z.
...	Ellipses indicate nonessential information that is omitted from the example.

Product documentation

- For API documentation, see [Dell Developer Portal](#).

Product information

For documentation, release notes, software updates, or information about products, go to **Online Support** at [Dell Support](#).

Where to get help

Go to **Online Support** at [Dell Support](#) and click **Contact Support**. To open a service request, you must have a valid support agreement. Contact your sales representative for details about obtaining a valid support agreement or with questions about your account.

Where to find the support matrix

Consult the **Simple Support Matrix** for RecoverPoint for Virtual Machines at [E-Lab Navigator](#).

Your comments

Your suggestions help Dell Technologies continue to improve the accuracy, organization, and overall quality of the user publications. Send your opinions of this document to [Content Feedback Platform](#).

Introduction

This guide contains a detailed description of all RecoverPoint for VMs events, and describes how to monitor and filter their appearance.

For more information about troubleshooting your specific RecoverPoint for VMs solution, see the following documents:

- *Dell RecoverPoint for Virtual Machines HTML5 Plugin Administrator's Guide* if your VMs are being protected on-premises.

For advanced event monitoring and troubleshooting options, log in to the RecoverPoint for VMs **Command Line Interface (CLI)** and run the `get_events_log` command. For more information, see the *Dell RecoverPoint for Virtual Machines CLI Reference Guide* .

Launching RecoverPoint for VMs plugin

Learn about how to launch the RecoverPoint for VMs plugin from vCenter Server.

Steps

1. Connect to a vCenter Server hosting RecoverPoint for VMs components.
2. Click **LAUNCH VSPHERE CLIENT (HTML5)**. You can also launch the **vSphere Client (HTML5)** directly by entering `https://vCenter-IP or FQDN:/ui/` into your address bar.
3. Click the **vSphere Client Navigation** menu, and then click **RecoverPoint for VMs** to display the RecoverPoint for VMs plugin in the vSphere Client

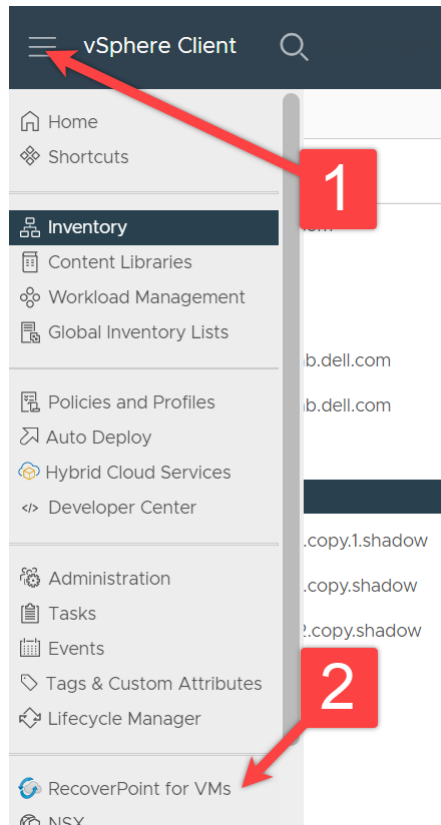

Figure 1. vSphere Client

Monitor system events

Monitor system events to troubleshoot your RecoverPoint for VMs environment.

An event is a notification that a change has occurred in the state of a system component. Sometimes, the change indicates an error or warning condition for a system component. Multiple events can occur simultaneously on a single component, and a single incident can generate multiple events across multiple system components.

By default, the following information is displayed for every event in the **Event**:

- **Level**, which can be: **Info**, **Warning**, or **Error**.
- **Scope**, which can be: **Normal**, **Root Cause**, or **Advanced**.
- **Time** and date that the event log was generated.
- **vRPA Cluster** reporting the event.
- **Event ID** that allows the event to be excluded from the events log using the event logs filter.
- **Topic**, which can be: **Splitter**, **Consistency Group**, **Management**, **Cluster**, **RPA**, or **Array**.
- **Summary** of the event.

To monitor your system events, click **Monitoring > Event**.

Monitor system alerts

System alerts are a mechanism that enables vRPA clusters to send events about system components in real time. Monitor system alerts to troubleshoot your RecoverPoint for VMs environment.

Steps

1. Click **Monitoring > Alerts** to monitor your system alerts.

A system alert type can be Warning or Error.

Alerts				
				Search
Cluster	Category	Severity	Description

Alerts per page 20				5 Alerts

2. Alternatively, you can also monitor system alerts in the [RecoverPoint for VMs Dashboard](#).

Monitor system limits

Monitor the limits that are imposed on your RecoverPoint for VMs system and system components to troubleshoot your system.

To monitor the state of your system limits, click **Monitoring > System Limits**. The **System Limits** screen displays the limits imposed on a system, or on consistency groups, vRPA clusters, or splitters in a system.

A system component's limit status can be '**Critical**', '**Warning**', or '**OK**'. Ensure an OK status is displayed for all of your system limits.

Monitor system components

Monitor RecoverPoint for VMs system components to better understand and troubleshoot your RecoverPoint for VMs environment.

To monitor the state of your system components, click **Monitoring > Components**. In the **System Components** screen, ensure an OK status is displayed next to each of your RecoverPoint for VMs system components.

Status	Name	Type	vRPA Cluster	Version
OK	vRPA1	vRPA	Site2	vRPA: 5.3.SP2(m.240)
OK	vRPA2	vRPA	Site2	vRPA: 5.3.SP2(m.240)

OK		ESX Splitter	Site1	SPLITTER: 5.3.SP2(m.222) JAM: 5.3.SP2(m.180)

NOTE: You can also monitor the state of **vRPA clusters** and **Components** in the [RecoverPoint for VMs Dashboard](#).

RecoverPoint for VMs Dashboard

The RecoverPoint for VMs Dashboard presents a high level overview of the RecoverPoint for VMs system to help you analyze and monitor your system health.

RecoverPoint for VMs Dashboard

The **Dashboard** is displayed every time that you log in to RecoverPoint for VMs. Use the **Dashboard** to monitor the status of your system licenses, limits, alerts, protected VMs, consistency groups, group sets, and recovery activities.

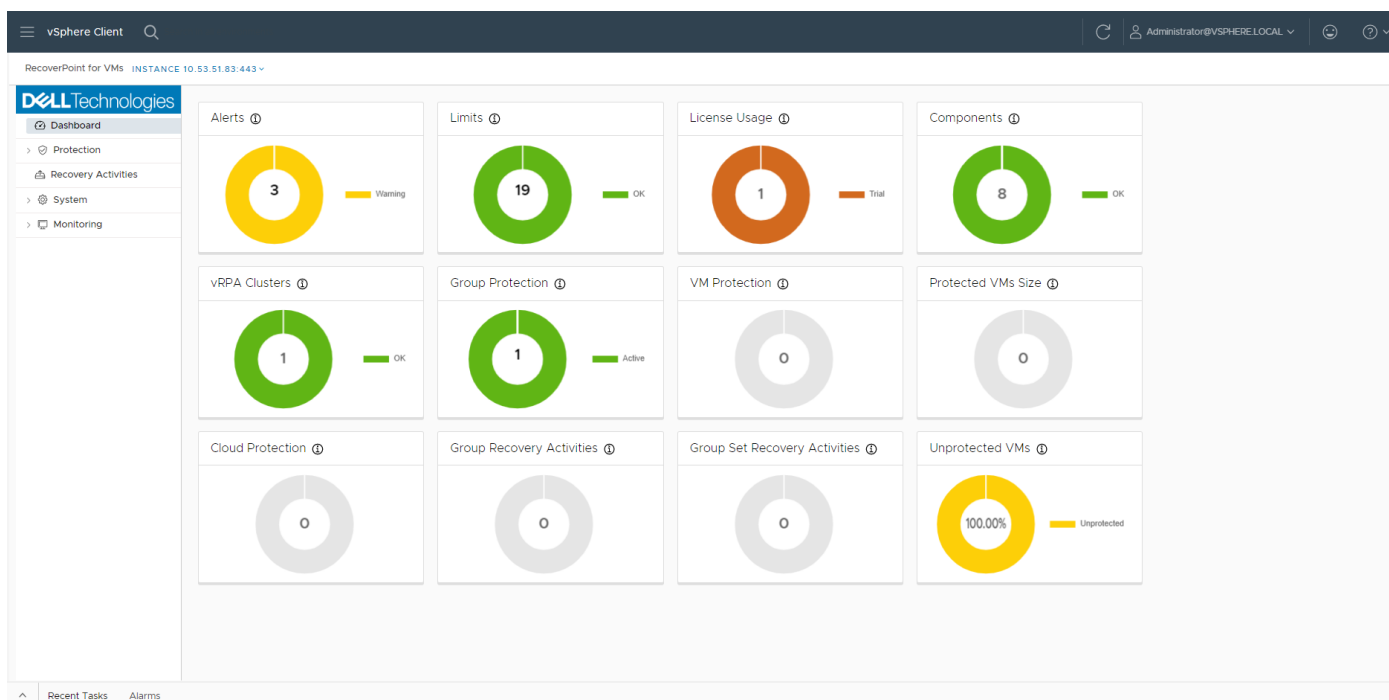

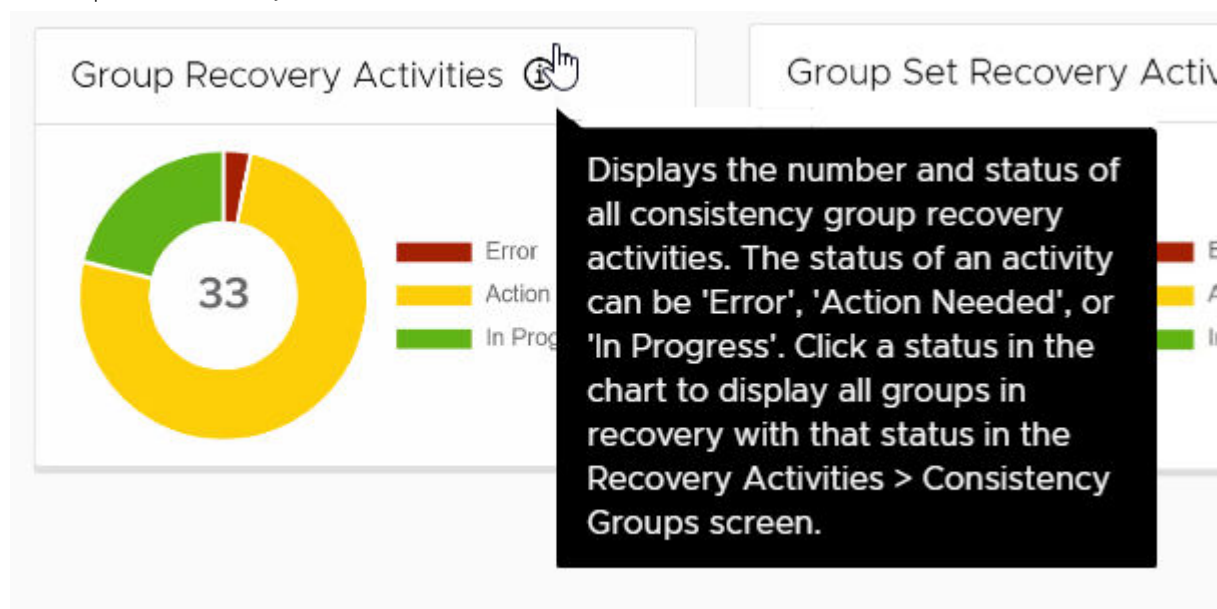

Figure 7. RecoverPoint for VMs Dashboard

In every **Dashboard widget**, you can:

- **Click the help icon** to display more detailed information about the widget system component or activity.
- **Click a status in a legend** (the colored bar or the label) to filter what is shown in the chart and display the number of system components with the status that you clicked. To clear the filter, click the status again.
- **Click a color of a status in a chart** to go to the relevant system component or activity screen, and display only the system component or activity in the clicked status.

Widgets in RecoverPoint for VMs Dashboard

Limits

- Displays the number and status of the limits that are imposed on system components like consistency groups, splitters, and vRPA clusters.
- The limit status of a system component can be '**Critical**', '**Warning**', or '**OK**'.

- Click a status in the chart to display all system components with that status in the **Monitoring > System Limits** screen.
- For more information, see how to [Monitoring System Limits](#).

Protected VMs Size • Displays the total size (in GB) of all protected VMs on this vCenter Server

Unprotected VMs

- Displays the percentage of unprotected VMs.
- When you hover over the widget, the exact number of unprotected VMs appears. This widget displays the number of VMs that are unprotected and have to be protected to make data protection available.
- The number of unprotected VMs = total VMs - protected VMs - vRPAs - RPC - replica or shadow VMs.

vRPA Clusters

- Displays the number and status of all registered vRPA clusters on all registered and linked vCenter Servers.

- The status of a vRPA cluster can be '**Error**', '**Warning**', or '**OK**'.
- Click a status in the chart to display all vRPA clusters with that status in the **System > Administration > vRPA Clusters** screen.

License Usage

- Displays the number of protected sockets out of the total number of licensed sockets.
- The usage status of a system license can be '**Trial**', '**OK**', or '**Violated**'.
- Click a status in the chart to display all licenses with that status in the **System > Licenses** screen.

Alerts

- Displays the number and types of alerts in the system.
- The type of an alert can be '**Error**' or '**Warning**'.
- Click an alert type in the chart to display all alerts of that type in the **Monitoring > Alerts** screen.
- For more information, see [Monitor system alerts](#).

VM Protection

- Displays the number and status of protected VMs on the vCenter Server that you are connected to, or a registered vCenter Server that is linked to the vCenter that you are connected to.
- The status of a protected VM can be '**Active**', '**Error**', '**Initializing**', '**Inactive**', or '**Paused**'.
- Click a status in the chart to display all protected VMs with that status in the **Protection > Protected VMs** screen.

Group Protection

- Displays the number and status of all consistency groups in the system.
- The status of a consistency group can be '**Active**', '**Inactive**', '**Initializing**', '**Paused**', or '**Error**'.
- Click a status in the chart to display all groups with that status in the **Protection > Consistency Groups** screen.

Group Recovery Activities

- Displays the number and status of all consistency group recovery activities.
- The status of an activity can be '**Error**', '**Action Needed**', or '**In Progress**'.
- Click a status in the chart to display all groups with that status in the **Recovery Activities > Consistency Groups** screen.

Group Set Recovery Activities

- Displays the number and status of all group set recovery activities.
- The status of an activity can be '**Error**', '**Action Needed**', or '**In Progress**'.
- Click a status in the chart to display all group sets with that status in the **Recovery Activities > Group Sets** screen.

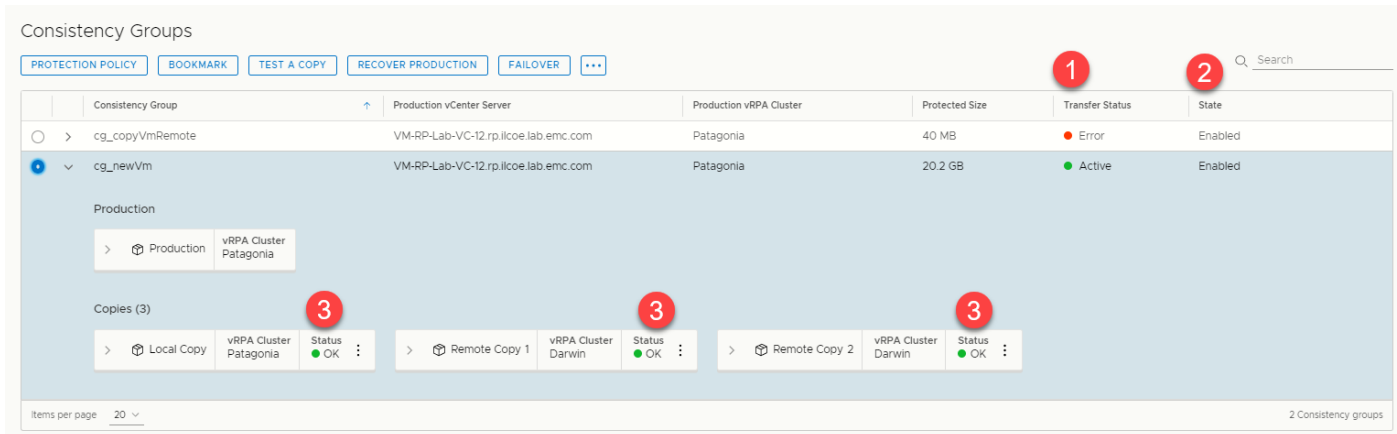

Monitor group and copy protection

Monitor the status of replication for consistency groups and copies, when managing or troubleshooting your system.

Steps

1. Select **Protection > Consistency Groups**.
2. Expand a group.
3. Note the **Transfer Status (1)** and **State (2)** of each consistency group and the **Status (3)** of each copy.

Results

- The **Transfer Status (1)** of a consistency group can be:
 - **Active:** Data is being transferred to a copy.
 - **Initializing:** A copy is being initialized: volume sweep, short init, or full sweep.
 - **High Load:** The system enters a temporary high-load state while data is being transferred to a copy, when the journal is full and cannot accept new writes. The system attempts to resolve the high-load state without user action.
 - **Paused by System:** System paused replication so data is not being transferred. If this state occurs for long periods of time, check the system alerts and events in the **Dashboard** for more information.
 - **Error:** An error has occurred.
 - **Permanent High Load:** The system enters a permanent high-load state while data is being transferred to a copy. A permanent high-load can occur after a temporary high-load. The system pauses replication and waits for user action.
 - **Paused:** User paused replication so data is not being transferred to a copy.
 - **Disabled:** User disabled a copy so data is not being transferred.
- The **State (2)** of a consistency group can be:
 - **Enabled:** A group is enabled for replication.
 - **Failed over:** A multicopy group has completed temporary failover.
 - **Being recovered:** A group is in the process of recovering production.
 - **Partially suspended:** Some of the copies of a group have been momentarily suspended while being upgraded.
 - **Suspended:** All the copies of the group have been momentarily suspended while being upgraded.
 - **Disabled:** A group is disabled for replication.
- The **Status (3)** of a copy can be:
 - **OK:** Data can be transferred to the copy.
 - **Initializing:** A copy is being initialized: volume sweep, short init, or full sweep.
 - **High Load:** A copy enters a temporary high-load state while data is being transferred to the copy, when the journal is full and cannot accept new writes. The system attempts to resolve the high-load state for the copy without user action.
 - **Paused by System:** System paused replication so data is not being transferred to a copy. If this state occurs for long periods of time, check the system alerts and events in the **Dashboard** for more information.
 - **Error:** An error has occurred on the copy.
 - **Permanent High Load:** A copy enters a permanent high-load state while data is being transferred to the copy. A permanent high-load can occur after a temporary high-load. The system pauses replication to the copy and waits for user action.
 - **Paused:** User paused replication so data is not being transferred to a copy.
 - **Disabled:** User disabled a copy so data is not being transferred.

Events reference

RecoverPoint for VMs events are displayed along with their ID, scope, summary, details, and when relevant, a recommended user action.

Topics:

- [Detailed events](#)
- [Normal events](#)
- [Advanced events](#)

Detailed events

The following table contains the **Detailed** scope events that the RecoverPoint for VMs system issues.

Table 2. Detailed events

ID	Topic	Level	Summary	More Info
1012	Mgmt	Warning	License grace period about to expire	License grace period expires in less than <x> days. You must obtain a new RecoverPoint for VMs license.
1013	Mgmt	Error	License expired	Obtain a new RecoverPoint for VMs license.
2000	vRPA Cluster	Info	Cluster management running on vRPA	
3002	vRPA	Warning	Cluster management switched over to vRPA	
3007	vRPA	Warning off	vRPA is up.	
3014	vRPA	Warning	vRPA unable to access volume	
3022	vRPA	Warning off	LAN link to vRPA restored	
3023	vRPA	Warning	LAN link to vRPA down	
3024	vRPA	Warning	DHCP changed one or more of the vRPAs	
3025	vRPA	Warning	VMDK capacity almost full	VMDK <x> of VM <x> at vRPA cluster <x> is almost at full capacity. To ensure that replication is not interrupted, see KB article 000180105 for instructions on how to fix this issue. If problem persists, contact Customer Support.
3026	vRPA	Info	VMDK capacity issue resolved	VMDK <x> of VM <x> at vRPA cluster <x> was almost at full capacity, but the issue has been resolved.
3165	Group	Error	Full sweep is taking more time due to incoming data.	Consider changing the link policy.
3170	Mgmt	Info	New site keys and certificates are generated and being synchronized between clusters.	
3171	Mgmt	Info	New site keys and certificates are synchronized between clusters.	
4000	Group	Info	Group capabilities OK	

Table 2. Detailed events (continued)

ID	Topic	Level	Summary	More Info
4001	Group	Warning	Minor problem in group capabilities	
4003	Group	Error	Group capabilities problem	
4007	Group	Info	Pausing data transfer for group	
4008	Group	Warning	Pausing data transfer to copy.	<ol style="list-style-type: none"> 1. To determine the cause of this event, check adjacent events for this group, both before and after this event. 2. Verify that transfer resumes in a timely manner. To do so, check the transfer state in the UI or CLI, or check subsequent events for this group. 3. If transfer does not resume, collect logs for the period when the event occurred, and contact Customer Support.
4009	Group	Error	Pausing data transfer for group	
4010	Group	Info	Starting data transfer to copy.	
4015	Group	Info	Transferring latest snapshot	Transferring latest snapshot before pausing transfer (no data loss).
4016	Group	Warning	Transferring latest snapshot	Transferring latest snapshot before pausing transfer (no data loss).
4017	Group	Error	Transferring latest snapshot	Transferring latest snapshot before pausing transfer (no data loss).
4018	Group	Warning	Transfer of latest snapshot complete	Transfer of latest snapshot from source complete (no data loss).
4019	Group	Warning	Group under high load	Group in high load -- transfer to be paused temporarily.
4020	Group	Warning off	Group high load over	
4021	Group	Error	Initialization paused	To complete initialization, add journal volumes to the journal or enable long initialization.
4022	Group	Error off	Initialization resumed	
4023	Group	Error	Transfer paused	To restart transfer, first disable access to the accessed image.
4024	Group	Error off	Transfer restarted	
4025	Group	Warning	Group under high load	Group is undergoing a high load so initialization is restarted.
4026	Group	Warning off	Group high load is over.	
4027	Group	Error	Group under high load	Roll to the physical image is paused and transfer is paused.
4028	Group	Error off	Group high load is over.	
4040	Group	Error	Journal error	Full sweep to be performed.
4041	Group	Info	Group side activated	
4042	Group	Info	Group side deactivated	
4043	Group	Warning	Group side deactivated	
4044	Group	Error	Group side deactivated	

Table 2. Detailed events (continued)

ID	Topic	Level	Summary	More Info
4045	Group	Error	Journal error	Volume(s) sweep to be performed.
4051	Group	Info	Resuming distribution	Disabling access to image and resuming distribution.
4054	Group	Error	Failed to access an image	
4057	Group	Error	Specified image removed from journal	The specified image has been removed from the journal. Disable image access and then enable image access on a different image.
4062	Group	Info	Access enabled to latest image	
4063	Group	Warning	Access enabled to latest image	
4064	Group	Error	Access enabled to latest image	
4070	Group	Warning	Journal error	Synchronization is a full sweep.
4084	Group	Info	Markers cleared	
4085	Group	Warning	Unable to clear markers	
4086	Group	Info	Synchronization started	
4087	Group	Info	Synchronization completed	
4088	Mgmt	Info	Set Markers was requested by user	
4091	Group	Error	Image access log is full	<p>Access to copy volumes for this group at this vRPA cluster has been disabled.</p> <p>If you do not wish to retain the writes that were added to the copy image while image access was enabled, disable image access; the relevant writes are automatically undone. Alternatively, use the undo writes command to undo the same writes; image access remains enabled.</p> <p>If, however, you want to retain the writes that were added to the copy image while image access has been enabled, you can do one of the following:</p> <ul style="list-style-type: none"> • Increase the size of the copy journal by adding one or more volumes to the journal. • Fail over to the copy. Note: The copy journal is erased. • Set the image access mode to direct access. Note: The copy journal is erased, and a full sweep synchronization is required to restore consistency between the production and copy images. <p>To help prevent this problem from recurring, increase the size of your image access log, using one or both of the following:</p> <ul style="list-style-type: none"> • Add volumes to the journal. • Modify the policy setting for the portion of the journal that is allocated to the image access log. This is permitted only when image access is disabled.
4097	Group	Warning	Starting three-phase distribution	<p>Check the maximum journal lag setting value, and verify that the current value is indeed required.</p> <ul style="list-style-type: none"> • If the maximum journal lag value has not been defined or the current journal lag is lower than

Table 2. Detailed events (continued)

ID	Topic	Level	Summary	More Info
				<p>the maximum journal lag value, this is probably a journal space or performance issue.</p> <ul style="list-style-type: none"> In this case, enlarge your journal or increase the speed of the journal by placing it in a faster array, on faster media, or any other procedure that can increase the journal write-rate.
4098	Group	Warning off	Maximum journal lag within limit	
4099	Group	Warning	Starting long initialization	
4120	Group	Warning	Journal usage exceeding threshold	
4122	Group	Error off	Trying to regain write permissions	Trying to regain write permissions to nonproduction copy.
4129	Group	Warning	Logged access enabled for unusually long time	Logged access has been enabled on a group copy for an unusually long time.
4130	Group	Warning off	Logged access no longer enabled for unusually long time	Logged access on group copy is now disabled, or it has been enabled to a different image.
4135	Group	Info	Copy entered maintenance mode	All copy activities have been suspended.
4136	Group	Info	Copy exited maintenance mode	All copy activities have resumed.
4137	Group	Info	Snapshot consolidation has been successful	
4138	Group	Warning	Snapshot consolidation failed	
4140	Group	Info	Change pipe mode because of sync/async dynamic settings	
4141	Group	Info	Snapshot consolidation policy change	The user has changed the snapshot consolidation policy setting(s).
4142	Group	Info	Snapshot consolidation request registered	
4160	Group	Info	Volumes were resized	
4161	Group	Info	Short initialization started	
4171	Group	Info	Volume changes	
4174	vRPA Cluster	Info	Volume migration started	Migration of <volume name> configuration data has started.
4216	Group	Warning	One or more failover networks are unavailable	
5013	Splitter	Error	Splitter is down	
5015	Splitter	Error off	Splitter is up	
5016	Splitter	Warning	Splitter has restarted	
5017	Splitter	Error off	Splitter version is supported	
5018	Splitter	Error	Splitter version is not supported	
5030	Splitter	Error	Possible splitter write failure	
5031	Splitter	Warning	Splitter not splitting to replication volumes	
5032	Splitter	Info	Splitter splitting to replication volumes	
5035	Splitter	Info	Writes to replication volumes disabled	
5036	Splitter	Warning	Writes to replication volumes disabled	
5037	Splitter	Error	Writes to replication volumes disabled	

Table 2. Detailed events (continued)

ID	Topic	Level	Summary	More Info
5038	Splitter	Info	Splitter delaying writes	
5039	Splitter	Warning	Splitter delaying writes	
5040	Splitter	Error	Splitter delaying writes	
5041	Splitter	Info	Splitter not splitting to replication volumes	
5042	Splitter	Warning	Splitter not splitting to replication volumes	
5043	Splitter	Error	Splitter not splitting to replication volumes	
5045	Group	Warning	Splitter and vRPA problem detected	Simultaneous problems reported in splitter and vRPA. Full-sweep resynchronization is required upon restarting data transfer.
5047	Group	Warning	Splitter problem detected	Problem reported in splitter. Volume sweep required.

Normal events

The following table contains the **Normal** scope events that the RecoverPoint for VMs system issues.

Table 3. Normal events

ID	Summary	More Info
1000	User logged in	
1001	User login failed	
1003	Failed to generate SNMP trap	
1004	Failed to send email alert	<p>Failed to send email alert to the specified address.</p> <p>Check whether there is an issue with your selected method of transfer. If a problem exists, fix it and then, perform a connectivity test by running the <code>test_syr_connectivity</code> CLI command.</p> <p>If problem persists contact Customer Support. For more information, see the <i>RecoverPoint for VMs CLI Reference Guide</i>.</p>
1005	Failed to update local file

1009	User action failed g fn b	
1014	User bookmarked an image g fn b	
1015	User bookmarked an image g fn b	
1017	MRPA to host multipathing problem m h i n g	
1018	MRPA multipathing problem fixed g m h i n g off	
1019	User action performed successfully m h i n g	

Table 3. Normal events (continued)

ID	Summary e p e t	More Info
1020	Failed to send system report g m h i n g	Check whether there is an issue with your selected method of transfer. If a problem exists, fix it and then, perform a connectivity test by running the <code>test_syr_connectivity</code> CLI command. If problem persists contact Customer Support. For more information, see the <i>RecoverPoint for VMs CLI Reference Guide</i> .
1031	System limit exceeded low watermark m h i n g	
1032	System limit passed below low watermark m h b	
1033	System limit exceeded high watermark m h i n g	
1034	System limit passed below high watermark m h b	
1035	System limit exceeded g m b r	
1036	System limit passed below limit g m b	
3000	vRPA successfully communicating with cluster P A i n g off	
3001	vRPA problem communicating with cluster P A i n g	vRPA is currently experiencing a problem communicating with its cluster.

Table 3. Normal events (continued)

ID	Summary	More Info
3005	Settings conflict between clusters R P A Cluster r	A settings conflict has been discovered between two vRPA clusters.
3006	Settings conflict between clusters Resolved P A Cluster r off	An user action resolves the settings conflict between vRPA clusters .
3008	vRPA appears to be down R P A i n g	
3036	vRPA clock out of sync R P A r	Contact Customer Support.
3037	vRPA clock is back in sync R P A r off	
3040	vRPA cluster added R P A Cluster	
3041	vRPA cluster removed R P A Cluster	
4056	No image in journal matches query r o o p	
4078	Replication set resized n b o p	
4082	Next synchronization will be a full sweep o o p n g	The copy marked all its replication volumes as dirty.

Table 3. Normal events (continued)

ID	Summary e p e t	More Info
4083	Next synchronization will be a volume sweep o a p n g	The copy marked some of its replication volumes as dirty. Next synchronization will be a volume sweep on these volumes.
4090	Image access log 80% full a o a p n g	<p>Image access is enabled to a nonproduction copy. The capacity of the copy journal image access log has nearly been reached; only limited further information can be written to it.</p> <p>If the log becomes full, the system blocks access by host applications to the replication volumes that belong to that group (and the application receives I/O errors). When the system is in this state, it is recommended that immediate action is taken to prevent the log from becoming 100% full.</p> <p>If you do not want to retain the writes that were added to the copy image while image access was enabled, disable image access; the relevant writes are automatically undone. Alternatively, use the undo writes command to undo the same writes; image access remains enabled.</p> <p>If, however, you want to retain the writes that were added to the copy image while image access has been enabled, you can do one of the following:</p> <ul style="list-style-type: none"> • Increase the size of the copy journal by adding one or more volumes to the journal. • Fail over to the copy. Note: The copy journal is erased. • Set the image access mode to direct access. Note: The copy journal is erased, and a full sweep synchronization is required to restore consistency between the production and copy images. <p>To help prevent this problem from recurring, increase the size of your image access log, using one or both of the following:</p> <ul style="list-style-type: none"> • Add volumes to the journal. • Modify the policy setting for the portion of the journal that is allocated to the image access log. This is permitted only when image access is disabled.
4107	Replication integrity check successful b o o p	
4108	Replication integrity issue detected o o p	A possible replication integrity issue has been detected. Contact Customer Support.
4121	Error writing to volume r o o p	<p>Ensure that RecoverPoint for VMs has write permission to all volumes.</p> <p>System retries automatically.</p> <p>If the problem recurs repeatedly, possible causes may be:</p> <ul style="list-style-type: none"> • Volume is thin device that is not attached to any storage pool. • Volume is attached to storage pool that is full. • Volume contains bad sector.

Table 3. Normal events (continued)

ID	Summary e p e t	More Info
		<p>If you extended a storage pool or attached a device to a storage pool, run the CLI command <code>rescan_san</code>. For more information, see the <i>RecoverPoint for VMs CLI Reference Guide</i>.</p> <p>If problem persists, contact Customer Support.</p>
4125	Journal capacity insufficient r o o p	Journal capacity is currently insufficient for the required retention period.
4126	Journal capacity sufficient r o o p off	Journal capacity is currently sufficient for the required retention period.
4127	Predicted journal capacity insufficient o a p n g	Journal capacity is predicted to be insufficient for the required retention period.
4128	Predicted journal capacity sufficient o a p n g off	
4131	Transfer paused or synchronizing for unusually long time o a p n g	
4132	Transfer resumed a o a p n g off	Transfer has resumed (following long pause or synchronization).
4133	Starting copy regulation r o o p	<p>The system has detected an unstable state in this copy, and the copy is being regulated for <x> minutes in order to allow for the environment to stabilize.</p> <p>See event Details for cause of regulation. Event logs can also be a good source for the detection of system issues. Look for repetitive errors, that may indicate a specific problem in the system.</p> <p>Also, check SAN/IP events outside of RecoverPoint for VMs, as instabilities may not originate from RecoverPoint for VMs.</p>

Table 3. Normal events (continued)

ID	Summary event	More Info
		If regulation persists, collect all system information, and contact Customer Support.
4134	Copy regulation has ended r o o poff	Copy regulation has ended due to a user action or internal timeout.
4158	Journal capacity extended a o a p n g	Journal capacity is currently extended for the required retention period.
4175	System has entered maintenance Mode P A	The RecoverPoint for VMs system is adding an vRPA to the cluster.
4176	System has entered maintenance Mode P A Cluster	The RecoverPoint for VMs system is performing a major version upgrade.
4177	System has entered maintenance Mode P A Cluster	The RecoverPoint for VMs system is performing a minor version upgrade.
4178	System has entered maintenance Mode P A	The RecoverPoint for VMs system is performing an vRPA replacement.
4179	System has exited maintenance Mode P A	The RecoverPoint for VMs system is no longer adding an vRPA to the cluster.
4180	System has exited maintenance Mode P A Cluster	The RecoverPoint for VMs system is no longer performing a major version upgrade.
4181	System has exited maintenance Mode P A Cluster	The RecoverPoint for VMs system is no longer performing a minor version upgrade.
4182	System has exited maintenance Mode P A	The RecoverPoint for VMs system is no longer performing an vRPA replacement.
4183	System has entered maintenance Mode P A	The RecoverPoint for VMs system is performing an vRPA conversion from class to RPSE.

Table 3. Normal events (continued)

ID	Summary	More Info
4184	System has entered maintenance mode RP A	The RecoverPoint for VMs system is no longer performing an vRPA conversion from class to RPSE.
4185	System has entered maintenance mode RP A Cluster	System has entered user-initiated maintenance mode
4186	System has exited maintenance mode RP A Cluster	System has exited user-initiated maintenance mode
4311	Load balancing recommendation	None
4505	Events deleted by user g m b	All the events (info, warning, and error) have been deleted, as requested by the user.
8000	Calling home g m b r	A service request is being opened for you with Customer Support.
8001	Call home event failure g m b r	Contact Customer Support.
8002	VM created RP A Cluster	
8003	VM network reconfigured RP A Cluster	
8004	Private network created on ESX RP A Cluster	
8005	Private network on ESX erased RP A Cluster	
8103	Storage was registered R	

Table 3. Normal events (continued)

ID	Summary e p e t	More Info
	P A Cluster	
8104	S Storage was unregistered R P A Cluster	
8105	W Lost connectivity to storage R P A Cluster i n g	Ensure that there is connectivity with the storage and that the entered credentials are correct, and try again. If problem persists, contact Customer Support.
8106	R Restored connectivity to storage R P A Cluster	
8107	R Resource pool was registered R P A Cluster	
8108	R Resource pool was unregistered R P A Cluster	
8202	B Bookmark has been applied n b o p	
8204	F Failed to replicate snap on time a o n p n g	
8206	N Next snapshot was not created a within configured RPO o n p n g	Please check the status of the group and verify it does not have problems. If external tool is managing snapshots, please align its settings with RPO configured for this group in RecoverPoint for VMs.
8300	F Failed to load system B Configuration P A Cluster r	
8328	C Connectivity to the Amazon S3 B Bucket was lost	

Table 3. Normal events (continued)

ID	Summary e p e t	More Info
	P A Cluster i n g	
8329	Connectivity to the Amazon S3 Bucket was restored P A Cluster	
9998	Cannot identify event R P A	
10203	VRPA cluster was down R P A r off	
10206	Internal process restarted R P A f error	
10207	Internal process restarted R P A f error	
10210	High load occurring during group Initialization P A r	High load situation is ongoing. Consider enabling fast first-time initialization.
10211	SAN communication problem Between splitters and vRPAs Existed but has resolved itself A r	Temporary issue on the SAN caused communication problems between splitters and vRPAs at the specified cluster. The problem resolved itself.
10213	High load occurring during group Initialization P A r off	High load situation is ongoing. Consider enabling fast first-time initialization.
10501	Initialization ended R P A	
10502	Access to image enabled R P A	Access to an image at the copy has been enabled.

Table 3. Normal events (continued)

ID	Summary e p e t	More Info
10503	Transferring latest snapshot R P A r	Transferring latest snapshot before pausing transfer (no data loss)
10504	Access to image disabled R P A	Access to an image at the copy has been disabled.
10505	Image access log writes have Been undone P A	None
10506	Roll to physical image complete R P A	Logged access to physical image now enabled.
10507	Journal available again R P A	Due to system changes the journal was temporarily out of service, but it is now available again.
10509	Initial long initialization complete R P A	
10510	Following a pause transfer system Now cleared to restart transfer P A	
10511	Finished recovering replication Backlog P A	
10512	Following a pause transfer system Now cleared to restart transfer P A	
12001	Splitter is down R P A r	
12002	Error in links to all other clusters R P A r	<p>Check if the other cluster is down.</p> <p>In case of IP connectivity issues:</p> <ul style="list-style-type: none"> • Check RecoverPoint gateways and IPs configuration. • Check if there are any ISP-related issues. • Check RecoverPoint for VMs firewall configuration. • If there is FC connectivity, check RecoverPoint zoning.

Table 3. Normal events (continued)

ID	Summary e p e t	More Info
		<ul style="list-style-type: none"> If you recently changed the network configuration, verify that RecoverPoint for VMs configuration matches the new network configuration. <p>If none of the above instructions resolve this issue, collect system information from all clusters experiencing connectivity issues, and contact Customer Support.</p>
12003	Error in link to an vRPA at other cluster(s) P A r	
12004	Error in data link to other cluster(s) P A r	<p>Error in data link. All vRPAs at cluster are unable to transfer replicated data to other cluster(s) due to communication failure over the WAN link. Data transfer between vRPA clusters has stopped.</p> <ol style="list-style-type: none"> Check if replication process at other cluster is down. If there is IP connectivity issues: <ul style="list-style-type: none"> Check RecoverPoint for VMs gateways and IP configuration. Check firewall configuration. If you recently changed network configuration, verify that RecoverPoint configuration matches the new network configuration.
12005	Error in data link over WAN. vRPA is unable to transfer replicated data to other cluster A r	<ol style="list-style-type: none"> Check if replication process at other cluster is down. If there is IP connectivity issues: <ul style="list-style-type: none"> Check RecoverPoint for VMs gateways and IPs configuration. Check firewall configuration. If you recently changed network configuration, verify that RecoverPoint configuration matches the new network configuration.
12006	vRPA is disconnected from the vRPA cluster P A r	
12007	All vRPAs are disconnected from the vRPA cluster P A r	
12008	vRPA is down R P A r	
12009	Link entered high load R P A r	<p>Due to heavy I/O activity a link entered a high load state in order to prevent I/O failures on that link. The following are among the possible causes of the high load:</p> <ul style="list-style-type: none"> vRPA is unable to handle the large volume of incoming data. vRPA performance statistics are available in the Release Notes that accompany each RecoverPoint for VMs product release. Journal reaches capacity, because the rate of the distribution process consistently lags behind the rate of incoming data to the copy journal. WAN is too slow to handle the data rate. Compression for WAN optimization is too high, such that the vRPA is unable to handle the volume of incoming data.

Table 3. Normal events (continued)

ID	Summary e p e t	More Info
		<ul style="list-style-type: none"> Peak I/O activity in the SAN causes a temporary bottleneck in the environment. This can be considered normal behavior, and does not necessarily require user action. <p>If high load persists, consider:</p> <ul style="list-style-type: none"> Running the <code>balance_load</code> command and applying the load-balancing recommendation. Manually modifying the preferred vRPA of each group. Checking for scheduled activities in your environment. Enabling fast first-time initialization.
12010	Journal error -- full sweep to be performed after error is corrected P A r	
12011	Image access log or virtual buffer is full P A r	<p>Access to copy volumes for this group at this vRPA cluster has been disabled.</p> <p>If you do not wish to retain the writes that were added to the copy image while image access was enabled, disable image access; the relevant writes are automatically undone. Alternatively, use the <code>undo writes</code> command to undo the same writes; image access remains enabled.</p> <p>If, however, you wish to retain the writes that were added to the copy image while image access has been enabled, you can do one of the following:</p> <ul style="list-style-type: none"> Increase the size of the copy journal by adding one or more volumes to the journal. Fail over to the copy. Note: The copy journal is erased. Set the image access mode to direct access. Note: The copy journal is erased, and a full sweep synchronization is required to restore consistency between the production and copy images. <p>To help prevent this problem from recurring, increase the size of your image access log, using one or both of the following:</p> <ul style="list-style-type: none"> Add volumes to the journal. Modify the policy setting for the portion of the journal that is allocated to the image access log. This is permitted only when image access is disabled.
12013	Cannot enable image access R P A r	Cannot enable image access to the specified image.
12026	Error occurred in link to an vRPA at other cluster(s) P A r	
12027	vRPAs are unable to access any volume at this cluster that belongs to this consistency group A r	<p>vRPAs cannot complete I/O operations at this cluster to any volume -- replication or journal -- in the consistency group.</p> <p>Check your SAN and storage configurations for any irregularities; for example, incorrect LUN masking or zoning.</p>
12031	Error occurred in link between one or more vRPAs at cluster and all vRPAs at other cluster(s)	Ensure that at vRPA cluster are connected properly to the other clusters.

Table 3. Normal events (continued)

ID	Summary	More Info
	<p> E A </p>	
12032	<p> Error occurred in link between all RRPAs at cluster and all vRPAs at Other cluster(s) A Cluster r </p>	Ensure that all vRPAs at cluster are connected properly to the other clusters.
12033	<p> Volume is not accessible; Repository data may be lost P A r </p>	
12034	<p> Writes to storage may have Occurred without corresponding Writes to vRPA A r </p>	
12035	<p> Cluster control at other cluster(s) Inavailable P A r </p>	Error occurred in link to cluster leader vRPA at other clusters.
12036	<p> Negotiation of transfer protocol Failed P A r </p>	<p>Negotiation of transfer protocol failed due to network issues in TCP layer between clusters.</p> <p>If problem persists, check your TCP network.</p>
12037	<p> All replication volumes in the Consistency group (or groups) are Not accessible A r </p>	
12038	<p> All journal volumes in the Consistency group (or groups) are Not accessible A r </p>	
12039	<p> Wong initialization started R P A i n g </p>	
12041	<p> Error writing to volume R P A r </p>	<p>Ensure that RecoverPoint for VMs has write permission to all volumes.</p> <p>If the problem recurs repeatedly, possible causes may be:</p> <ul style="list-style-type: none"> • Volume is thin device not attached to any storage pool. • Volume is attached to storage pool that is full. • Volume contains bad sector.

Advanced events

The following table contains the **Advanced** scope events that the RecoverPoint for VMs system issues.

Table 4. Advanced events

ID	Topic	Level	Summary	More Info
2004	vRPA Cluster	Info	Repository volume created	
2006	vRPA Cluster	Info	Splitter(s) added	
2007	vRPA Cluster	Info	Splitter(s) removed	

Table 4. Advanced events (continued)

ID	Topic	Level	Summary	More Info
3003	vRPA	Warning	Stopping a system process	
3004	vRPA	Info	Starting a system process	
3009	vRPA	Warning	A system process stopped	
3031	vRPA	Warning	An internal process restarted	
3033	vRPA	Info	Negotiating transfer protocol	
3034	vRPA	Info	Negotiating transfer protocol	
3035	vRPA	Info	An internal process restarted	
4005	Group	Info	Negotiating transfer protocol	
4013	vRPA	Info	Negotiating transfer protocol	
4014	Group	Info	Negotiating transfer protocol	
4050	Group	Info	Enabling access to image	
4052	Group	Warning	Enabling access to image	
4072	Group	Info	Journal cleared	
4073	Group	Warning	Journal cleared	
4074	Group	Error	Journal cleared	
4075	Group	Info	Journal available	
4076	Group	Info	Adding volume(s)	
4077	Group	Info	Removing volume(s)	
4089	Group	Info	Delta marker moved to bitmap mode, next synchronization may not be optimal	
4092	Group	Info	Accessing image	Writing by hosts to the accessed image has been enabled.
4093	Group	Info	Undoing writes to image access log	
4094	Group	Info	Writes to image access log have been undone	
4100	vRPA Cluster	Info	Group created	Creating a new group modifies the load distribution across vRPAs. To balance the write load across all vRPAs run the <code>balance_load</code> CLI command in seven days and apply the recommendation.
4101	vRPA Cluster	Info	Group removed	
4102	Group	Info	Journal volume(s) removed	
4103	Group	Info	Journal volume(s) added	
4104	Group	Info	Group started accepting writes	
4105	Group	Info	Group stopped accepting writes	
5049	Splitter	Warning	Splitter write to vRPA failed	
10000	vRPA	Info	Analyzing changes in system	

Table 4. Advanced events (continued)

ID	Topic	Level	Summary	More Info
10001	vRPA	Info	System is stable	System changes have occurred. System is now stable.
10002	vRPA	Info	Issuing intermediate report	System activity has not stabilized and therefore, an intermediate report is being issued.
10101	vRPA	Error	Unrecognised system activity	Cause of system activity unclear. To obtain more information filter events using Detailed scope.
10102	vRPA	Info	Internal changes occurred	Cluster control recorded internal changes that do not impact system operation.
10201	vRPA	Info	Settings have changed	
10202	vRPA	Info	System changes at other cluster	System changes have occurred at the another cluster. For details of the system changes, refer to the event log at the other cluster(s).
10513	vRPA	Info	Internal changes occurred	Cluster control recorded internal changes that do not impact system operation.
12042	vRPA	Error	Splitter write may have failed during transfer	Splitter write may have failed (while group was transferring data). Synchronization is required.
